

Equine CranioSacral Workshops Presents

New Workshop!

ECS5 Assessment, Occlusion and Biomechanics

July 17-21, 2007

Still Point Farm – Portland, Oregon

Cotaught with Equine Dentist

Lucinda Stockley

Lucinda Stockley is one of the UK's leading and most educated equine dentists in the world. She teaches internationally and is sought out for her expertise in equine dentistry. Lucinda's years as a competitive rider in the UK and Australia give her an edge on understanding the importance of keeping the equine performance-horse's mouth in balance and in optimal health.

ECS5 Assessment, Occlusion and Biomechanics of the Equine Athlete

This five day workshop expands upon the craniosacral foundation (ECS1) by introducing students to the role and importance of the teeth and addressing their effects on the healthy biomechanics of the equine athlete. The first two days are focused on dental anatomy, physiology and the development of the teeth of the horse, the effects of the bit and care. Over the next three days, students assess movement and posture for biomechanical imbalances and then treat the horses, combining previous craniosacral skills and expanding upon them. Students' hands-on experience will include palpating inside the mouths.

Cost: \$1,200

Location: Still Point Farm – Portland, Oregon

To Register, or for more information,
